NEW PRECAST FOUNDATION WALL SYSTEM INSTALLED SQUARE, LEVEL IN ONE DAY

North Brookfield, Mass., April 30 -- Chase Precast, a division of Oldcastle Precast, has introduced the Oasis Foundation Wall System, a custom made precast concrete foundation wall system that consists of 6,000 psi concrete, EPS foam insulation and DensArmor® Plus paperless drywall.

Oasis Foundation Wall Systems include openings for doors, windows, beam pockets and other necessities. Corners can be mitered for any angle and walls are 8.5-feet high and up to 30-ft. long. Because the Oasis system is manufactured in a factory environment and installed by factory trained representatives, the actual foundation is both square and level with much tighter tolerances than can be achieved pouring a foundation in place. In addition, Oasis Foundation Walls are installed directly on a bed of crushed stone without the need for separate footings.

“When it comes to the foundation, builders throughout New England no longer have to worry about weather or schedule-related delays or a poured foundation that is neither level nor square,” said Bob Kramer, president, Oldcastle NE Precast Division. The Oasis system is built in a factory environment with tight quality control, enabling us to provide a superior foundation system.”

Oasis walls are ideal for both traditional stick-built construction as well as modular home construction. Once installed, the basement can be completed by taping the drywall seams, and painting or hanging wallpaper. Utility voids exist in the walls for easy installation of electrical wiring or plumbing. In addition, the Oasis system is installed by factory trained professionals, and typically takes only about a day and can be completed in a variety of weather conditions.

The system resists moisture and prevents water penetration, resulting in a dryer, mold-free and more comfortable environment. Additionally, the combination of insulation, high density concrete and paperless drywall provides an R-10 insulation rating, as well as superb sound deadening for a quieter living space.

“I’ve installed several Oasis Foundation Wall Systems, and it’s a great foundation that provides an immediate short-term gain and a long-term return on your investment,” said Dan Bandar, owner of Bandar Development, of Middleton, Mass. “It’s a very clean finish system and people really like the end result.”

Oasis Foundation Wall Systems are immediately available throughout New England. Interested builders should contact David Bruni, sales manager at 866-423-4810 ext 228, or by email (david.bruni@oldcastleprecast.com). Additional information, photos, technical data and literature are available on-line at www.OasisWall.com.
