

What do homeowners think of their Oasis foundations?

“The sun streams into my basement office, where I am warm and comfortable, knowing that the foundation is solid. The service you provided was exceptional, and I thank your whole team for their efforts.”

— Erin Reilly, Wellesley, MA

“The quality far surpasses what we would have had with a poured-in-place foundation. It’s watertight, square and level. In fact, a concrete contractor with 35 years of experience told me that he wished he could provide a foundation like ours.”

— Jay Schevis, Peabody, MA

“My company makes research equipment in my basement, where we have a machine shop, an electronics area and an office. The entire space is dry, clean and comfortable, with no musty smell or dampness. I am very happy with my Oasis foundation.”

— Eric Karplus, Falmouth, MA

The Oasis Foundation Wall System: *A whole new level of living space.*

When is a basement more than a basement?

Oasis Foundation Wall System Features

When it's a family room, a home theatre, an office — or whatever else you want it to be.

Have you always wanted a home gym? Maybe a billiard parlor? How about a wine cellar, or a workshop dedicated to your favorite hobby?

If you're planning to build a new home (or an addition with a basement), now is the time to plan your dream room. Because when your basement begins its life as an Oasis Foundation Wall System, there's no limit to what it can become.

Start with a finished basement.

The Oasis Foundation Wall System is the best and fastest way to turn your basement into that extra living space you've always dreamed about.

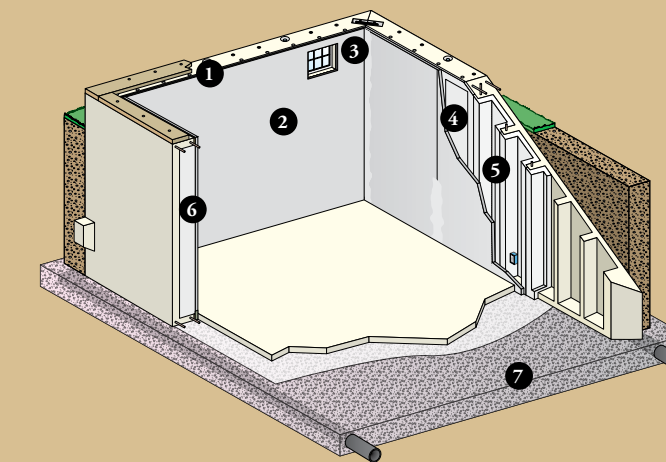

Every Oasis system is custom designed and manufactured specifically for each individual home or addition. Our precast foundation walls are made with high-strength concrete, insulated, and finished with paperless interior-grade wallboard — meaning your Oasis System basement is far superior in quality and appearance to any traditional poured-in-place foundation. And because most installations can be completed in just one day and in almost any weather, an Oasis foundation allows your construction project to move along quickly. After simple taping and painting, your basement is ready to become your dream space.

An Oasis Foundation Wall System is energy efficient, mold and mildew resistant, quiet, warm and comfortable. And when it's finished, it won't have that typical "basement" smell. An Oasis foundation even boosts your home's resale value.

Oasis is from a world leader in construction products.

Oasis Foundation Wall System basements are designed, manufactured and installed solely by Oldcastle Precast, a division of Oldcastle — one of the construction industry's leading producers of construction materials and building products. We work directly with your builder to ensure that your foundation meets all specifications and building codes. All you have to do is decide what your extra space will be.

For a basement that just might become the most popular room in your home, choose an Oasis Foundation Wall System.

1. Threaded bolts for sill plate attachment
2. Mold-resistant paperless gypsum wallboard
3. Concealed joint fasteners for panel-to-panel connections
4. R-13 rated total wall system
5. Utility chase every 24 inches on center accessible from top of wall
6. All system components are precast into 10-inch thick wall panels
7. 8-inch thick crushed stone footing and perimeter drain (by contractor)
